

Team Deliverable 2: Progress Report Presentation

By now your team should have a partially functioning application while still anticipating the need for polish. For this deliverable, your team will present the progress of your project, updates and outstanding elements of your team's progress in a narrated PowerPoint presentation. This presentation should also identify any concerns and anticipated plans to resolve these concerns. Additionally, you will provide us a detailed update on your progress according to your Gantt Chart. If you were not specific in providing team member roles and tasks in the Technical Presentation, make sure you are explicit in this presentation.

Your video is limited to 5 minutes. Demos are not required but encouraged. Avoid using lengthy bulleted paragraphs and/or full text slides. We prefer an **annotated PowerPoint in .mp4 format**.

Presentation Criteria:

- At least one of your team members must be in this presentation. Remember that each team member should present in at least one video this semester.
- Update on completed portions of the Gantt Chart and plans for project completion.
- Give a clear and detailed explanation of your project status and any outstanding elements of your application. This includes any plans how you will deploy the final product.
- Demonstrations are encouraged but not required. Just be sure to effectively show elements of your application. Screenshots, images, small clips are acceptable.
- Also include any further research you have done, next steps, etc.
- Presentation Quality (timeliness, clarity, interest, poise, enthusiasm, visual interest)
- **Must be narrated.**

Have **ONE** person (**the PM**) from each group submit the video file via the Assignments tab in T-Square. Please state the team name and team members in the text of the submission.

Submit your Progress Report (Technical Presentation) as an annotated PowerPoint ("**Progress Report - <Team Name>.mp4**" format) via T-square. **Due: April 10, 2016 by Midnight AOE.**
